### Overview

Distributed energy (DE) differs from centralized energy in several respects. It has the advantages of high energy efficiency because it utilizes local renewable resources, and. Based on this analysis, along with the collective knowledge and work of the authors, we make the following recommendations to. Distributed energy (DE) is one of the cornerstones of China's energy transition. Yet distributed energy is still drastically underdeveloped relative to its potential in China. Despite large and growing markets for some distributed. Use cases for distributed energy are an effective way to portray its real potential in China to contribute to the country's climate and clean energy goals. A use case is a particular technology application and configuration that is. government agencies: Develop market-based mechanisms and rules that allow local energy trading and chart a pathway to enable distributed.
