

You don t have a battery

Overview

If battery storage isn't in the cards for now, don't worry! You can still use your solar panels to power your home without battery storage. In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar production, but higher energy. In many cases, battery storage is a “nice to have” with solar panels for home use. However, there are a growing number of scenarios where having a solar battery bank is beneficial, if not. Absolutely! In fact, most home solar systems are currently operating without battery storage. If you're fine with drawing from the grid and not particularly worried about power outages, you might not need a battery. However, there.
